

*FINDING THE FUEL FOR A*

# Clean Energy Future

**Standard Uranium** is exploring for high-grade uranium to supply fuel for the clean energy future.

# Legal Disclaimer

All statements, other than statements of historical fact, contained in this presentation constitute “forward-looking statements” within the meaning of the United States Private Securities Litigation Reform Act of 1995, and “forward-looking information” under similar Canadian legislation and are based on the reasonable expectations, estimates and projections of the Company as of the date of this presentation. Forward-looking statements and forward-looking information include, without limitation, possible events, trends and opportunities and statements with respect to, among other things, the state of the uranium market, global market conditions, the ability of the Company to identify and acquire assets, results of exploration activities, the nature of potential business acquisitions, capital expenditures, successful development of potential acquisitions, currency fluctuations, government policy and regulation, geopolitical uncertainty and environmental regulation. Generally, forward-looking statements and forward-looking information can be identified by the use of forward-looking terminology such as “plans”, “expects” or “does not expect”, “is expected”, “budget”, “scheduled”, “estimates”, “forecasts”, “intends”, “anticipates” or “does not anticipate”, or “believes”, or variations of such words and phrases or state that certain actions, events or results “may”, “could”, “would”, “might” or “will be taken”, “occur” or “be achieved”. Forward-looking statements and forward-looking information are necessarily based upon a number of estimates and assumptions that, while considered reasonable by the Company as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. Many of these uncertainties and contingencies can affect the Company’s actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements and forward-looking information made by, or on behalf of, the Company. All of the forward-looking statements and forward-looking information made in this presentation are qualified by these cautionary statements. Although management of the Company has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements or forward-looking information, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements and forward-looking information. The Company does not undertake to update any forward-looking statements or forward-looking information that are incorporated by reference herein, except in accordance with applicable securities laws. Nothing in this presentation should be construed as either an offer to sell or a solicitation of an offer to buy or sell shares in any jurisdiction.

Sean Hillacre, P.Geo., is the Qualified Person under National Instrument 43-101 who has reviewed and approved the scientific and technical content in this presentation.

# FUELING A CLEAN ENERGY FUTURE

Mission: Generate exploration projects prime for making significant high-grade uranium discoveries in the Athabasca Basin region of Saskatchewan, Canada.

233,455 acres across the Athabasca Basin in 57 mineral claims.

## Project Generation & Exploration

# Essentials for Success in Uranium Exploration

01 Experienced Geologists

02 Projects with Geological Merit

03 First Nations & Community Agreements

04 Exploration Permits

05 Skilled Drillers

06 Key Vendors

07 Capital to Fund Exploration

08 Board & Executive Experience in Uranium

# Company Snapshot

## STANDARD URANIUM

- Project generator & exploration company
- Extensive exploration plans in 2025

## FLAGSHIP PROJECT

- Davidson River Project in the Southwest Athabasca (SWA) Uranium District
- New exploration targets

## STRONG TEAM

- Skilled technical team backed by capital markets team with uranium exploration experience

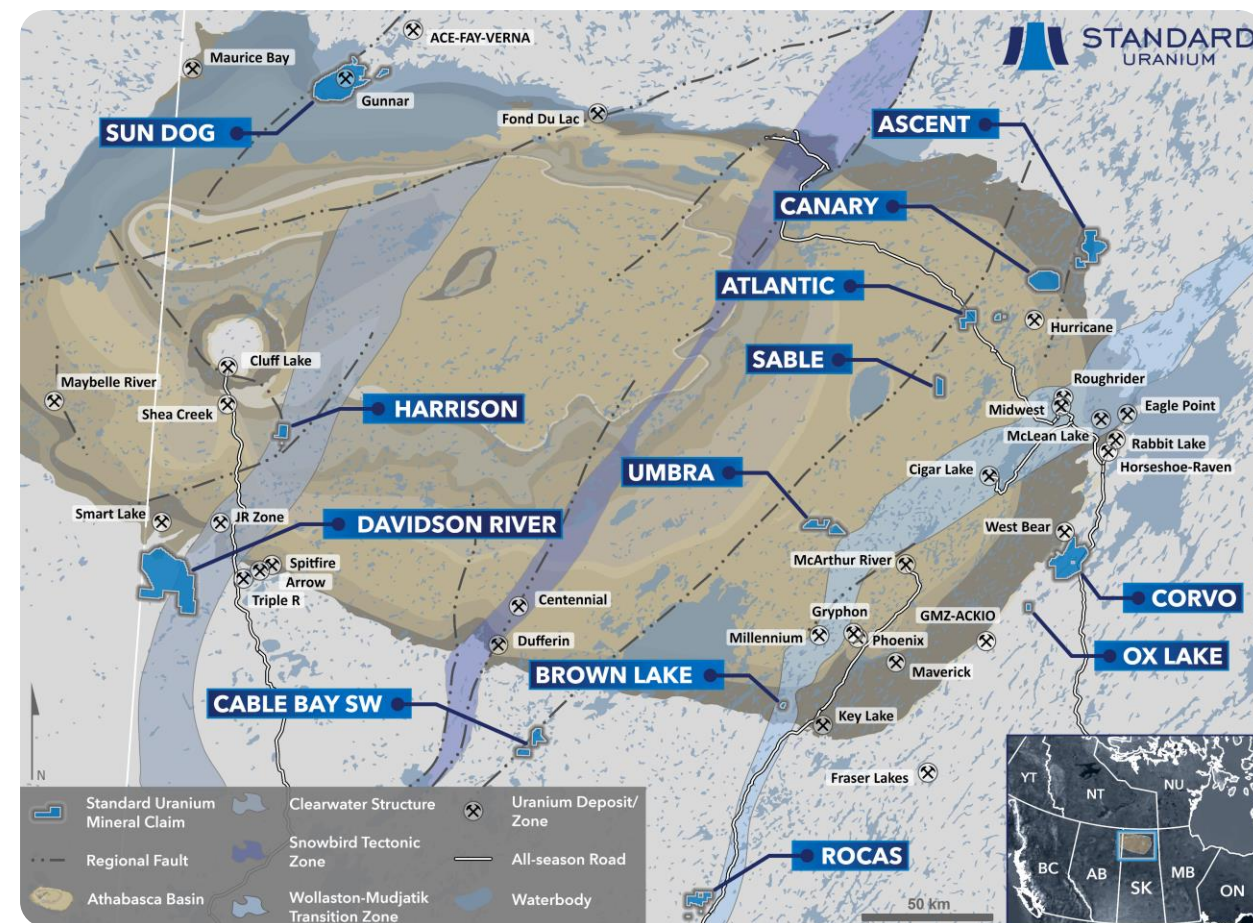

## NUCLEAR POWER RENAISSANCE

- Back by popular demand! The true solution to reach climate goals. Global catalyst driving nuclear energy and uranium exploration

## SHORT-TERM CATALYSTS

- 2025 exploration programs at Sun Dog, Eastern Basin projects, and Davidson River

## The Athabasca Basin, Saskatchewan

# The Standard Uranium Team

Built around individuals with a proven track record of uranium discoveries specifically in the southwest corner of the Athabasca Basin.

# THE DAVIDSON RIVER PROJECT

Standard Uranium's Davidson River project is in good company in the Southwest Athabasca Uranium District.

The Southwest Athabasca district contains more than **400M lbs. of high-grade uranium** in known deposits, and discoveries continue.

## TRIPLE R

Indicated  
102.4M lbs  
2.10% U<sub>3</sub>O<sub>8</sub>

Inferred  
32.8M lbs  
1.22% U<sub>3</sub>O<sub>8</sub>

## ARROW

Meas. & Ind.  
256.7M lbs  
3.10% U<sub>3</sub>O<sub>8</sub>

Inferred  
80.7M lbs  
0.83% U<sub>3</sub>O<sub>8</sub>

## SPITFIRE

Drill Hole: HK16-53  
14.3m of 7.57% U<sub>3</sub>O<sub>8</sub>  
including 1.3m of 53.3% U<sub>3</sub>O<sub>8</sub>

## JR ZONE

Drill Hole: PLN22-035  
15.0m of 6.97% U<sub>3</sub>O<sub>8</sub>  
including 5.5m of 18.6% U<sub>3</sub>O<sub>8</sub>

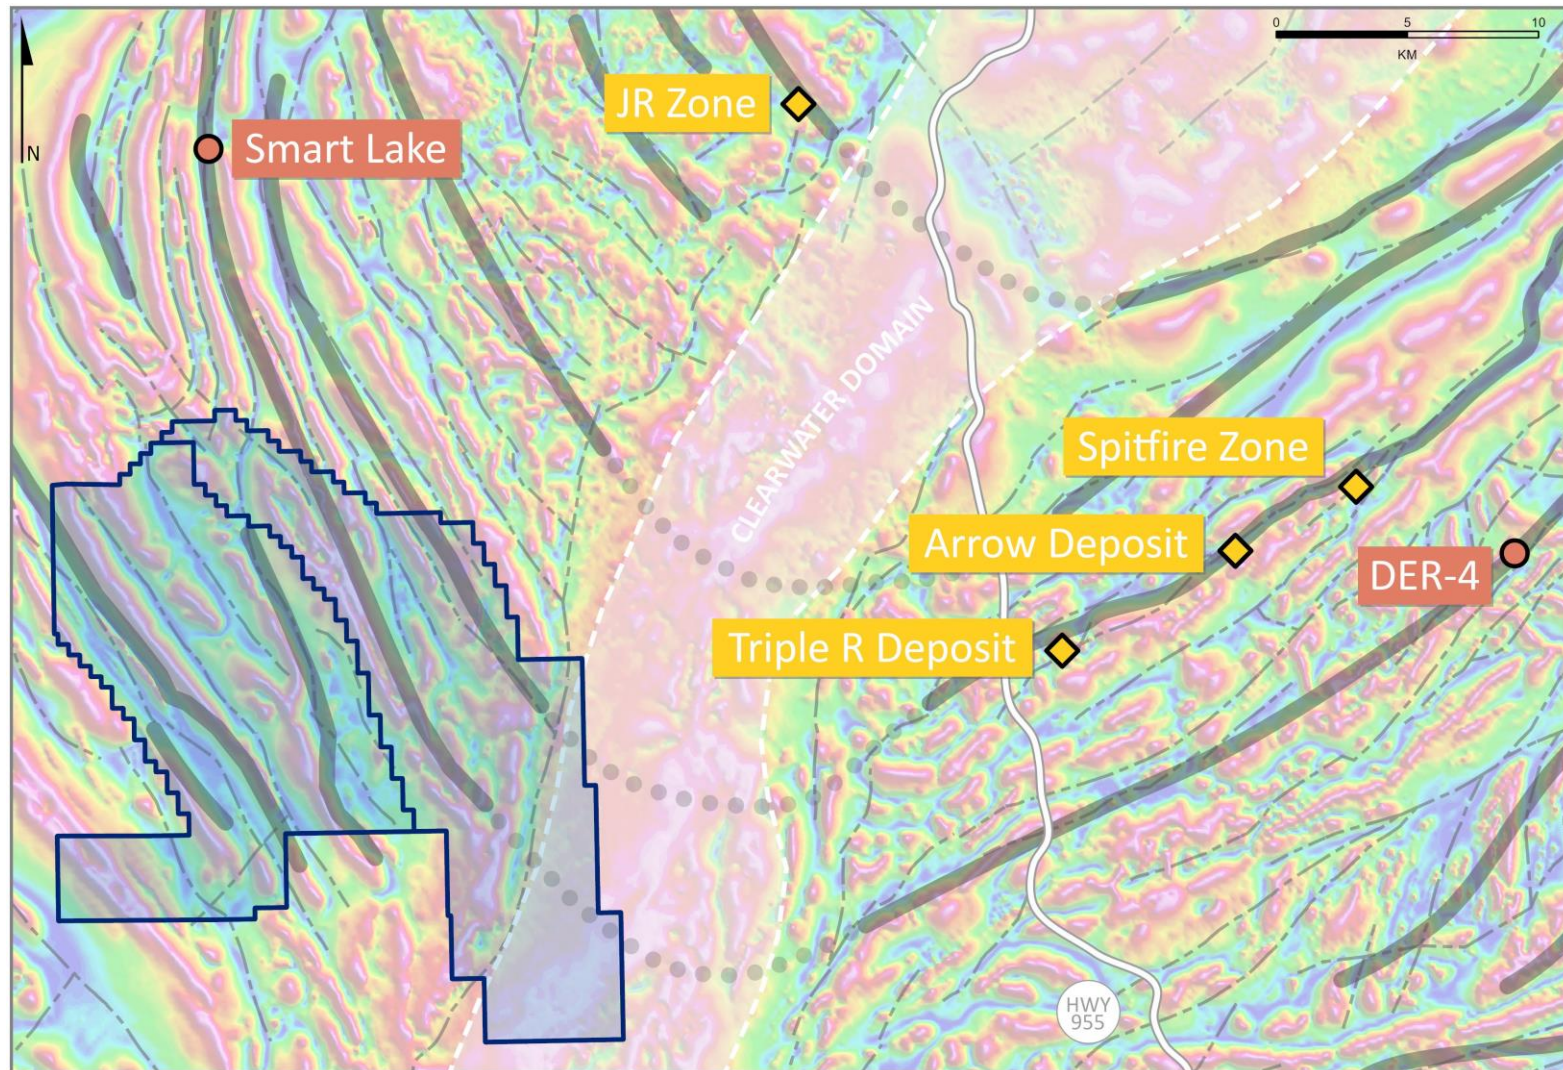

# Following the Trends

## EXPLORATION USING MODERN TECHNOLOGY

Standard Uranium has laid the foundation for discovery using industry-leading surveys to define more than **70 km of prospective exploration trends** at Davidson River. The geological mirror theory has been validated by the recent discovery of the JR zone, west of the Clearwater Domain.

Standard Uranium is the first uranium company to leverage **GoldSpot Discoveries Corp.’s data-driven machine learning processes** and **Fleet Space’s ANT-Gravity-HVSR Multiphysics**, aiding in identifying and prioritizing drill targets.

Neighboring uranium deposits provide training data used to vector into discovery on the Davidson River project.

-  Significant Uranium
-  Uranium Occurrence
-  Claims Border
-  Exploration Corridors
-  Interpreted corridor links
-  Interpreted faults

# Davidson River - Drill Programs

## SUMMER 2020 – SUMMER 2022

16,561 metres – 39 drill holes

**Warrior Corridor:** Strongly graphitic shear zones and elevated radioactivity. Additional targets to the SE.

**Saint Corridor:** Strong ductile deformation and clay alteration. Several targets remain.

**Bronco Corridor:** Strongly graphitic structures and clay alteration akin to those intersected at major deposits in the SW Athabasca Basin, associated with **elevated radioactivity and dravite alteration.**

**Thunderbird Corridor:** first drill holes ever to test geophysics targets – Strongly graphitic structures, **redox fronts**, and **clay-dravite alteration.**

Multi-kilometre portions of the conductive corridors on the property remain to be tested.

### Thunderbird Corridor

### Warrior & Bronco Corridors

A) The first Thunderbird drill hole on the Davidson River project, DR-22-033A, showing strong structurally controlled hematite-limonite alteration (redox fronts); 163.5m. B) Strong “worm-rock” textured hematite-limonite alteration overprinting graphitic shear planes; DR-22-033A; 163.6m.

C) Strongly graphitic reactivated shear zone in DR-21-027 along the Bronco trend. D) Semi-brittle graphitic shear zone intersected in DR-21-027 peaking at 540 cps along the Bronco trend. E) Graphitic fault gouge zone in DR-21-030 along the Bronco trend. F) Intensely graphitic shear zone intersected along the Bronco trend in hole DR-21-031.

# Future Exploration

## SUMMER/FALL 2025

### DRILL PROGRAM

*Refined Targets, Extended Exploration Strike Length*

Aggressive step-out holes along strike to test additional targets refined by drilling to date, in addition to **NEW CLAIMS** staked.

**REFINED TARGETS:** Follow up along strike of alteration (**dravite**), geochemistry, and stacked **graphitic structures**.

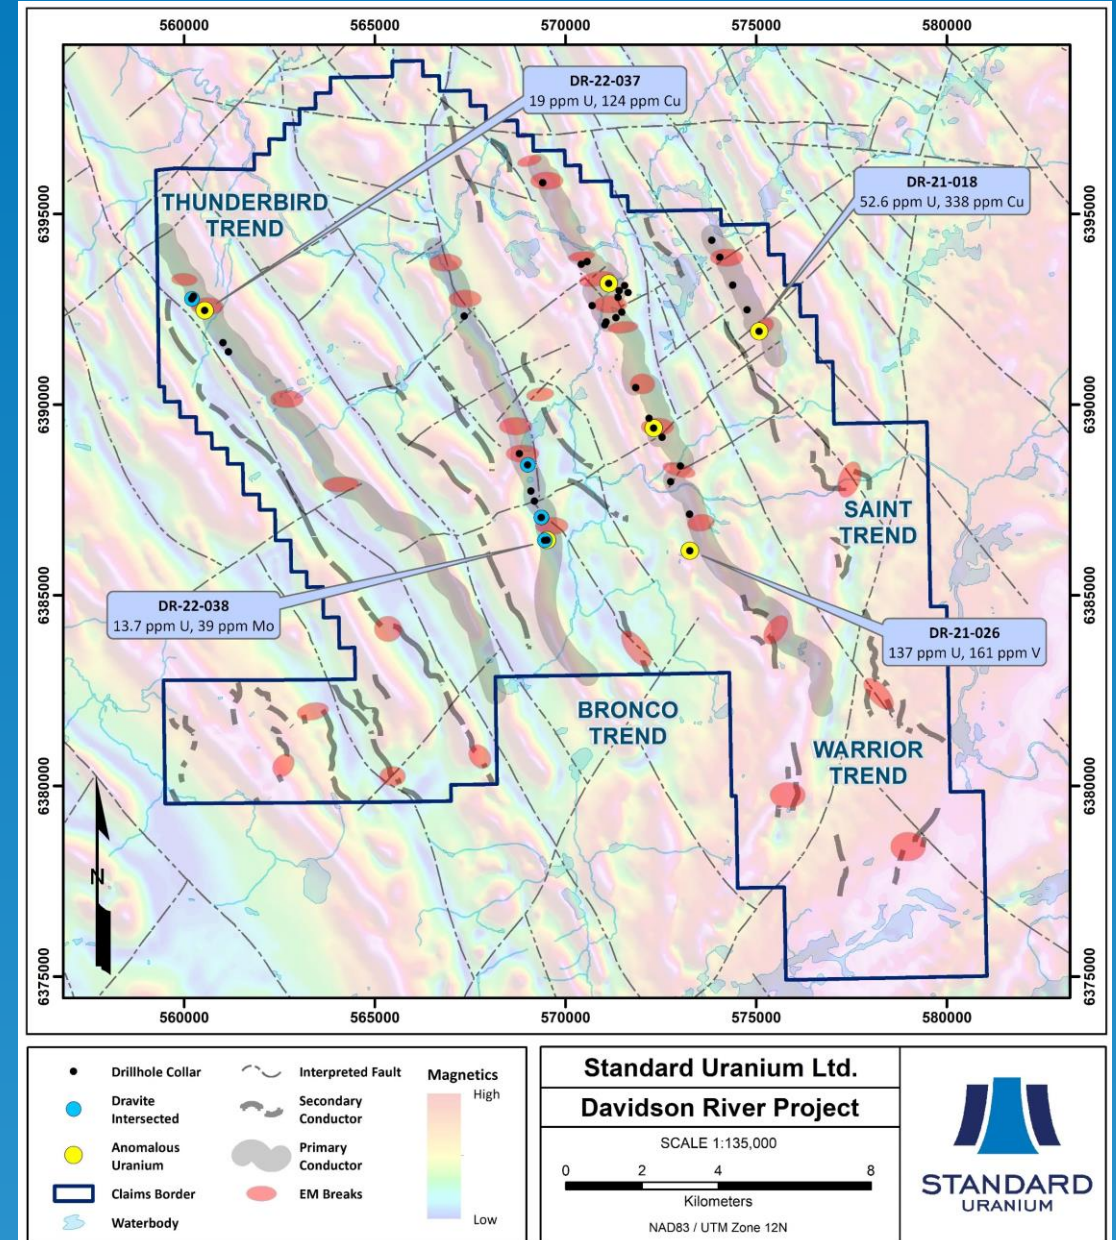

New **Fleet Space** multiphysics survey & GoldSpot AI/Machine-learning technology incorporated into drill hole targeting and prioritizing - **NEW TARGETS**.

Fully permitted with First Nations agreement signed.

**Several kilometres of untested conductor strike length with massive discovery potential remain; Drilling planned 2025.**

# The Sun Dog Project

## HISTORIC URANIUM CITY DISTRICT

19,603 Hectares; Active 3-Year Option Deal

**Surface sampling** – Skye target, Java target, and Haven discovery have returned grab sample results with highs of **3.58% U<sub>3</sub>O<sub>8</sub>**, **1.7% U<sub>3</sub>O<sub>8</sub>**, and **0.7% U<sub>3</sub>O<sub>8</sub>**, respectively.

### Haven Discovery

Elevated radioactivity up to 1,300 cps intersected in first drill hole in the area.

Mineralization associated with significant dravite-clay and iron-oxide alteration, in addition to wide structural zones.

### Johnston-Bay Targets

Moderate to strong alteration and structure throughout drill holes.

Strong concentrations of graphite in highly deformed metasedimentary basement rocks; Local elevated radioactivity and dravite alteration.

# The Sun Dog Project

## Ongoing Exploration

2024 Drill Program – 1,593m in 8 drill holes

**Anomalous Radioactivity at Wishbone:** 7 drill holes targeting shallow high-grade basement-hosted uranium mineralization intersected intervals of **anomalous radioactivity >300 cps in graphitic rocks** – 2024 geophysics and drill program funded by JV partner Aero Energy Ltd.

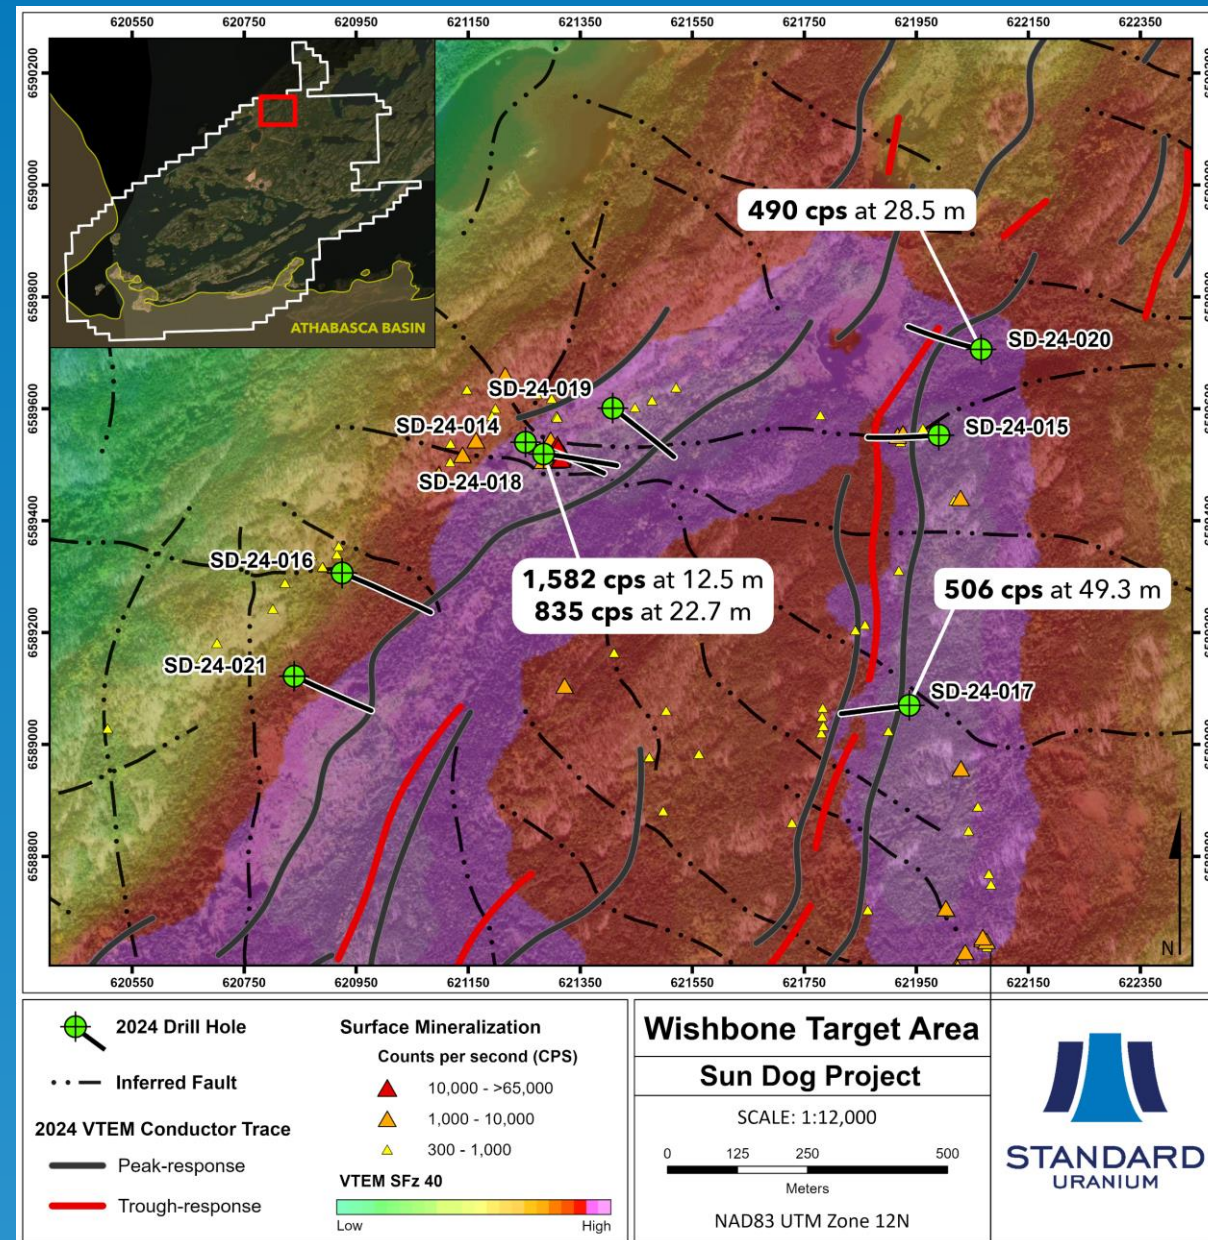

**Significant Structure & Alteration:** Strongly graphitic fault rocks intersected on both fold limbs of the Wishbone target area, coincident with widespread hydrothermal alteration – ideal environment for basement hosted uranium deposits.

**\$2M in exploration planned** – Extensive gravity survey completed + 2025 drill program

**Full 3-year permit** and vendors engaged for continued exploration.

# Eastern Athabasca Basin Projects

42,384 Hectares; 36 Mineral Claims; JV Ready

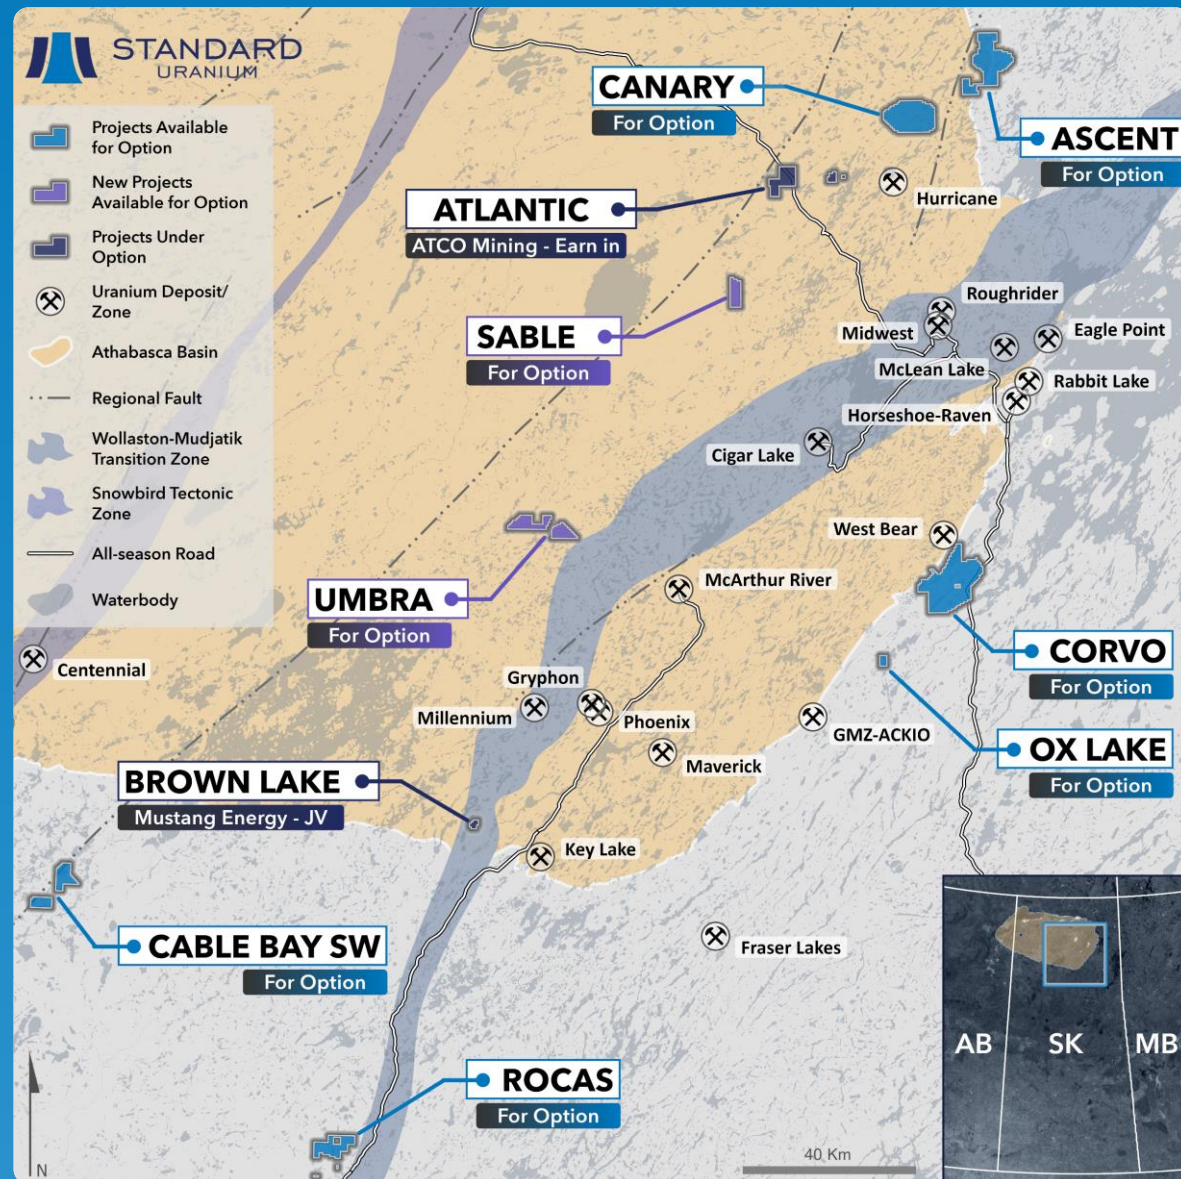

Standard Uranium has strategically acquired ten projects in the prolific eastern Athabasca Basin region – **Ascent, Canary, Atlantic, Corvo, Rocas, Cable Bay SW, Ox Lake, Brown Lake, Sable, and Umbra**.

Atlantic, Canary, and Ascent lie within the northern portion of the eastern Athabasca Basin, proximal to the Hurricane deposit. Other projects are positioned within or marginal to the present-day eastern boundary of the Athabasca Basin, prime for discovery of near-surface high-grade uranium mineralization akin to the recent Gemini uranium discovery by 92 Energy.

The eastern Basin projects are highly prospective for **unconformity related and/or basement hosted uranium deposits** based on historical uranium occurrences, recently identified geophysical anomalies, and location along trend from several high-grade uranium discoveries.

# Corvo Project

*12,265 Hectares; 100% Owned; Recently Expanded Letter of Intent for Option*

Three strong NE-SW **magnetic low trends** on the property coincident with **EM conductors** extending **~29 km** in length

**Uranium mineralization** is present along a strike length of 800 m in drill holes TL-79-3 (0.057%  $U_3O_8$  over 3.5 m) to TL-79-5 (0.065%  $U_3O_8$  over 0.1 m) within the east-central claims

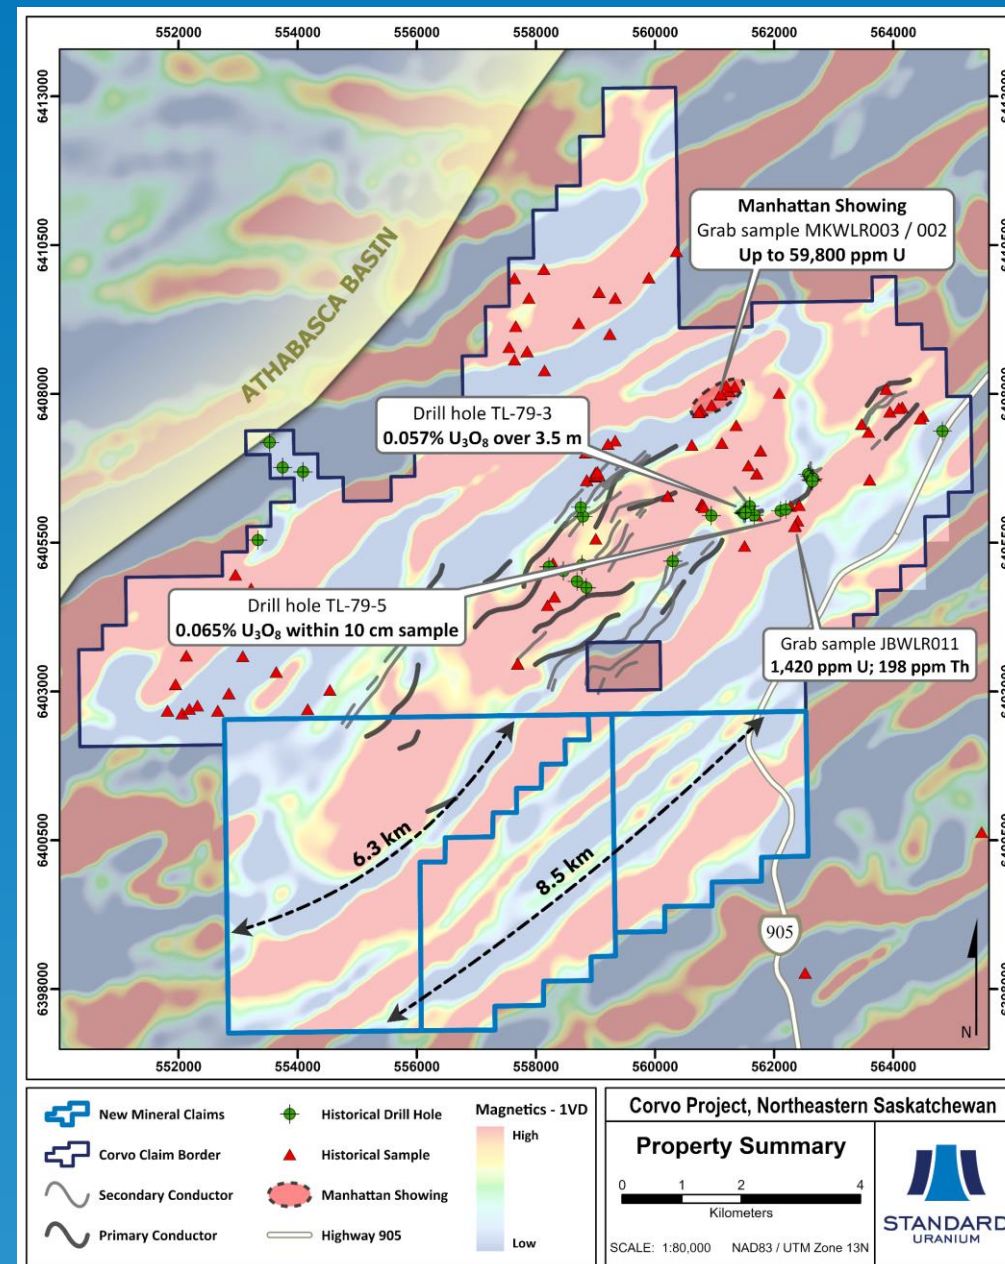

**Manhattan showing** – Historical outcrop samples up to **59,800 ppm U** - Never drill tested

Property is **road accessible** in the infrastructure-rich eastern Athabasca Basin

**Exploration Plans:**  
**2025 H2** – Mapping/prospecting & geophysics  
**2026 H1** – Inaugural drill program
